Project Name	ShopEZ
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Step-1: Team Gathering, Collaboration and Select the Problem Statement

ShopEZ is an online e-commerce application based on the MERN stack that can be used for buying and selling products over the internet. This application was developed by one person in her capacity as a college project. The problems that were encountered in this field included the fact that customers find it difficult to discover products from multiple sellers in one place, small sellers struggle to reach a wider audience without building their own website, and there is no simple way to track an order from placement to delivery.

Step-2: Brainstorm, Idea Listing and Grouping

Total 12 ideas were generated for addressing the above-stated problem. They were categorized under the headings of Customer Module, Seller Module, Admin Module, and Order Management Module.

Step-3: Idea Prioritization

All 12 brainstormed ideas were prioritized according to their significance and practicality. Key features including customer registration, seller registration, product listing, product search, shopping cart, and checkout/order placement have been assigned a high priority rating. Order status tracking and dashboards were considered equally important and assigned medium priority. Future improvements like payment gateway integration, product reviews, wishlist, and notifications were assigned a low priority rating and will be incorporated in future versions of the platform.

High Priority	Medium Priority	Low Priority (Future)
• Customer Registration & Login • Seller Registration & Login • Product Listing (Add/Edit) • Product Search by Category • Shopping Cart • Checkout & Order Placement	• Order Status Tracking • Customer & Seller Dashboards • Order Cancellation	• Payment Gateway Integration • Product Reviews & Ratings • Wishlist • SMS / Email Notifications

Conclusion

The brainstorming and idea prioritization exercise helped narrow down the full scope of ShopEZ into a clear, achievable set of core features for the initial release, while keeping a roadmap of future enhancements. This prioritized list directly informed the product backlog and sprint planning carried out in the Project Planning phase, ensuring that the most valuable features - registration, product listing, search, cart and checkout - were delivered first.
